PPL & ATPL Theory Training Solution

Flexible. Compliant. Proven.

Fixed Wing & Helicopter
UK CAA & EASA
Approved

A complete PPL/ATPL theory solution designed to support instructors, simplify compliance, and improve student outcomes.

Your ATPL/CPL Theory Partner

Delivering ATPL theory training places significant demands on an Aviation Training Organisation — from regulatory compliance and quality assurance to instructor availability, student outcomes, and cost control.

Bristol Groundschool exists to remove that complexity.

For over 30 years, we have partnered with ATOs across the UK, Europe, and beyond to deliver ATPL theory training that is compliant, flexible, and operationally efficient — for both fixed-wing and helicopter operations.

We work as a true training partner, adapting our systems to how your ATO operates, not the other way around.

We can also deliver ATPL theory training under Bristol Groundschool's UK CAA or EASA approvals — fully online if required.

Gill Fowkes
Director

Why Partner with Bristol Groundschool?

ATPL theory training does not need to be resource-heavy or operationally complex.

Our role is to simplify theory delivery while supporting consistently high student outcomes.

With Bristol Groundschool, you can:

- Deliver ATPL theory under your approvals or ours (EASA or UK CAA)
- Maintain clear, auditable quality assurance evidence for local Authorities
- Scale student numbers without increasing staff workload
- Offer modern, engaging learning materials trusted worldwide

We are the only ATO delivering both UK CAA and EASA ATPL theory courses while producing our own learning materials in-house.

Our systems are already trusted by ATOs across multiple regulatory environments, making implementation straightforward and low risk.

We support integrated, modular, and distance learning models — allowing you to design theory training that fits your approvals, resources, and commercial objectives.

A Complete ATPL Theory Solution

ATPdigital — Core Learning Platform

ATPdigital is our computer-based ATPL learning system, guiding students step by step through the full syllabus using animated diagrams, videos, case studies, progress quizzes, and structured tests.

For your ATO, this means:

- Structured learning that reduces instructor intervention
- Built-in knowledge checks to ensure progression standards
- Early visibility of students who need additional support
- Consistent training delivery across cohorts and locations

Students can study online or offline across multiple devices, with progress synchronised automatically.

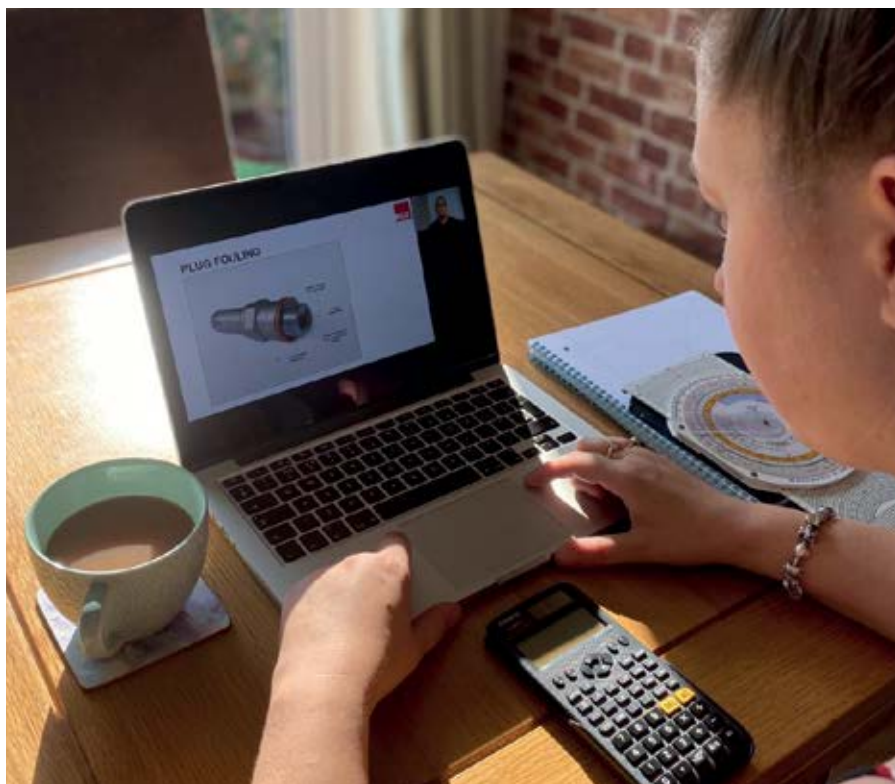

BGS Question Bank – For Exam Preparation

Your students receive twelve months' access to our Question Bank, featuring over 15,000 UK CAA and EASA exam-style questions for fixed-wing and helicopter training.

Key benefits:

- Realistic exam practice aligned to current learning objectives
- Detailed explanations to close knowledge gaps
- Progress dashboards for individual and class performance
- Tools to generate mock exams for revision, quality assurance monitoring, and instructor oversight

Students can study online or offline across multiple devices, with progress synchronised automatically.

Flexible Delivery – Built Around Your Operation

Every ATO operates differently. Our ATPL theory solution is designed to adapt.

You can:

- Teach theory in-house using our materials
- Outsource classroom instruction to our instructors, 100% online
- Deliver live, recorded, or blended learning
- Customise subject order or follow a proven syllabus structure
- Brand student materials with your ATO's name and logo

If required, we can deliver classroom tuition online under our approvals — allowing you to focus internal resources on flight training and operational priorities.

Compliance, Quality Assurance & Peace of Mind

We understand the regulatory environment ATOs operate in.

- Training materials approved by EASA and the UK CAA
- Student study time is automatically recorded and printable for inspection
- Clear tracking of student progress and assessment outcomes
- Continual updates to reflect syllabus and regulatory changes
- Template documentation available to support new ATO applications

Our systems are designed to support inspections, audits, and regulatory oversight — ensuring your theory training remains robust and inspection-ready.

Proven Results

ATOs across the UK, Europe, and worldwide trust Bristol Groundschool to support their ATPL theory training.

Our consistently high exam pass rates, long-standing industry reputation, and experienced instructional team enable you to offer students a learning experience that drives success — while protecting operational efficiency.

Try Before You Commit

Request a Free Demo

We offer ATOs full access to our ATPL theory platform for a trial period — with no cost and no obligation.

Explore the system, review the content, and see how it fits your operation before making a decision.

A Partnership — Not Just a Product

When you partner with Bristol Groundschool, you gain more than software.

You gain:

- A named account manager who understands your operation
- Ongoing technical and instructional support
- Continually updated course materials aligned with UK CAA and EASA requirements
- A long-term partner invested in your success
- We work alongside you to ensure your ATPL theory delivery remains robust, compliant, and commercially sustainable.

What our partners say

“

“Bristol Groundschool consistently delivers high-quality, well-structured training materials that support both instructors and students exceptionally well. Their communication is prompt, professional, and reliable, and any technical or academic queries are addressed efficiently. Our students are satisfied with the content and feel well prepared for their examinations. We highly value the support and partnership provided by Bristol Groundschool and would confidently recommend them to other training organisations.”

Timone, Signa Aviation Services

“

“We work closely with Bristol Groundschool and are very satisfied with this collaboration. Their teams are highly responsive, professional, and easy to work with, always demonstrating a strong commitment to quality and pedagogy. The training content is clear, well-structured, and up-to-date, fully aligned with the requirements of aviation training. A reliable and trusted partner, with whom it is a real pleasure to collaborate. We highly recommend Bristol Groundschool.”

Justin, Hexagone Aviation School.

Let's train tomorrow's pilots together
